## SPECIFICATIONS

| SIZE & COUNT                            |                                                                                                               |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------|
| Diameter                                | 1/2 in (0.5 in, 12.7 mm) circle                                                                               |
| Dots per roll                           | 1,000                                                                                                         |
| Core                                    | 3 in inside diameter, 0.625 in wide                                                                           |
| Roll outside diameter                   | About 3.7 in                                                                                                  |
| Dots across                             | One, wound with the dots facing out                                                                           |
| Spacing on the liner                    | About 0.071 in gap between dots (0.571 in center to center)                                                   |
| Roll length                             | About 48 ft (calculated from the dot spacing)                                                                 |
| Packaging                               | Each roll shrink-wrapped with a barcoded "REMOVABLE" label                                                    |
| MATERIAL & ADHESIVE                     |                                                                                                               |
| Standard, Specialty & eaRth Tone colors | Bright white matte litho paper, color printed; HR-51 removable acrylic adhesive; about 6.4 mil total          |
| Fluorescent Red, Green, Pink            | Fluorescent paper; TR440 removable acrylic adhesive                                                           |
| Metallic Gold                           | Dull (satin) gold foil; TR440 removable acrylic adhesive                                                      |
| TEMPERATURE                             |                                                                                                               |
| Lowest application temperature          | 40° F (Fluorescent and Gold, TR440)                                                                           |
| Service range once applied              | -65° F to 150° F (Fluorescent and Gold, TR440)                                                                |
| Standard, Specialty & eaRth Tone colors | Supplier temperature data not published; apply at room temperature                                            |
| COMPLIANCE & ORIGIN                     |                                                                                                               |
| Food contact                            | TR440 adhesive (Fluorescent and Gold) is cleared for indirect food contact. Not for direct contact with food. |
| Made in                                 | Saint Marys, Kansas, USA (printed, die-cut and wound in house)                                                |

## GOOD TO KNOW

### Do they really come off cleanly?

They're made to. Sherrill used them on a laminated poster: "they came off perfectly!" Removable adhesive builds up over time, though. Heat, pressure and months on the surface make any removable dot harder to lift. On something valuable, test one first.

### Removable or permanent: which do I need?

Removable if the dot is temporary: prices, room setups, status that changes, borrowed items. Permanent if it has to survive handling or cold. Rachel tried removable on vaccine syringes: "The removable formula did not work on syringes as they don't stick." She switched to permanent.

### Can I use them in the cold?

Apply removable dots at room temperature. The fluorescent and gold colors (TR440 adhesive) need 40°F or warmer to apply and then hold from -65°F to 150°F. For freezer work, choose permanent dots.

### How big is 1/2 inch?

0.5 in (12.7 mm), a little smaller than a dime. Big enough for a dot code; tight for writing more than a letter or number. See the size guide in the photos.

### Can I write on them?

Yes. The standard colors are matte paper, which takes felt-tip and permanent marker well. There's room for a letter, number or initials. We haven't lab-tested ballpoint or pencil; ask for a free sample to try your pen.

### Will the roll fit my dispenser?

Standard 3-inch core, about 5/8 in wide and about 3.7 in across. It fits dispensers built for 3" cores and narrow rolls. Rolls ship without a dispenser box; if you want a box, look at the 1/2" removable box of 1,000.

## ORDERING

Order online at [chromalabel.com/products/1-2-removable-color-code-dots-1-000-roll](https://chromalabel.com/products/1-2-removable-color-code-dots-1-000-roll). Volume pricing from 3 rolls (any mix of colors), applied at checkout. Purchase orders accepted with Net 30 terms (\$200 minimum). 78% of recent orders for this item shipped within 2 business days. Free economy shipping in the USA on orders over \$150.
