GOOD TO KNOW

Will they stick in the freezer?

Yes. The standard and fluorescent colors use AT150, an all-temperature adhesive that can be applied down to -20°F and holds from -65°F to 160°F. Erica uses them on frozen meat: "The dots do indeed stick to frozen products!" Metallic Gold is different: apply it at 35°F or warmer.

Can I write on them?

Yes. Most customers mark them with a felt-tip or permanent marker. The standard colors are semi-gloss paper, so give the ink a few seconds to dry before you touch it. We haven't lab-tested ballpoint or pencil. If your pen matters, ask for a free sample and try it first.

How big is 3/4 inch, really?

Exactly the diameter of a U.S. penny: 0.75 in (19.05 mm). See the size guide in the photos. Need something you can spot from across a warehouse? Try the 2" dots.

Do they work outdoors or when wet?

They're made for indoor use on clean, dry surfaces. The face is paper, so rain and constant moisture will wear it, and one customer found Metallic Gold dots lifting off tags left outside. For outdoor use, talk to us first.

How does the box dispense?

The 1,000 dots are one continuous roll inside the box. Pull the end of the roll out of the box opening and peel dots off one at a time. The box has a hang tab, so it can hang on a peg or hook.

Do volume discounts work if I mix colors?

Yes. Every color of this product counts toward the same quantity tier, so 1 red + 1 green + 1 yellow is 3 boxes. Different sizes or formats are counted separately. The discount is applied automatically when you check out.

ORDERING

Order online at chromalabel.com/products/3-4-inch-color-code-sticky-dots. Volume pricing from 3 boxes (any mix of colors), applied at checkout. Purchase orders accepted with Net 30 terms (\$200 minimum). 98% of recent orders for this item shipped within 2 business days. Free economy shipping in the USA on orders over \$150.
